

Request for iHSPCs from existing iPSC lines

Use this form to request distribution of induced hematopoietic stem/progenitor cells (iHSPCs) generated from iPSC lines listed in the EvansMDS iPSC inventory.

Parties:

Requesting Party: Principal Investigator of the laboratory making the request.

Recipient: Institution that will be receiving requested materials.

Director: Dr. Eirini Papapetrou, Director of the EvansMDS iPSC Resource

Foundation: The Edward P. Evans Foundation

Instructions: Complete all sections of the application on the following pages. Each request is limited to attempted differentiation of a single iPSC line (and isogenic controls, if available). The Requesting Party must be a faculty level investigator at a US institution and must demonstrate that they have sufficient expertise handling differentiated human iHSPCs. Requests are subject to review and approval by the Director and the Foundation's Scientific Advisory Board and are contingent on available funds. Shipping and research expenses are the responsibility of the Requesting Party. The Requesting Party is also responsible for obtaining all necessary institutional and regulatory approvals. Eligible Requesting Parties must agree to use the requested material solely for non-commercial and academic research purposes. The Requesting Party is expected to deposit any "omics" data generated from iHSPC cells in an appropriate database.

Submit the completed application as a single PDF to: grants@epefoundation.org

The Requesting Party will receive a response to the request by email within ten (10) business days.

Request for iHSPCs from existing iPSC lines (cont.)

PI (“Requesting Party”):

PI Academic Rank:

PI email:

Requesting Institution (“Recipient”):

Recipient Address (Institution):

Shipping Address (Receiving Laboratory):

Recipient’s FEDEX Account:

Requested iPSC line for differentiation:

Intended Purpose:

(Provide a brief scientific description of the intended use of the differentiated iHSPCs in the space provided. Address cell numbers required for the proposed experiments and include an explanation of the relevance to the EvansMDS mission.)

Request for iHSPCs from existing iPSC lines (cont.)

iHSPC Experience:

(Provide a brief description of the requesting laboratory's experience handling differentiated human iHSPCs.)
